Bugs and issues: buglist@gnostic-scriptorium.com

System Requirements:

Note: If the links below don't work anymore (Microsoft has a habit of moving things around) you can always get a copy of the .Net Framework by going to the main Microsoft sit (<http://www.microsoft.com>) and following the link there. If you have a new(er) computer the Framework may already be installed. You can check by looking in Control Panel \ Administrative Tools:

Notice that you can have more than one version of the Framework so make sure you have 2.0. If not you can install it without removing or changing anything else on your PC.

Required Components:

Microsoft .NET Framework Version 2.0 - Free download

<http://www.microsoft.com/downloads/details.aspx?FamilyID=0856eacb-4362-4b0d-8edd-aab15c5e04f5&DisplayLang=en>

If you have your service packs up-to-date you should be able to just download the installer and click through.

Microsoft Data Access Components (MDAC) - most systems should have this installed.
<http://www.microsoft.com/downloads/details.aspx?FamilyID=6c050fe3-c795-4b7d-b037-185d0506396c&DisplayLang=en>

Most likely, you will have this, especially if you have office. Not certain about it but the Framework redistributable should update what you need. The full Framework definitely does.

System:

Basically, if your computer can handle the 2.0 Framework (you will have to have your service packs up to date) then Scriptorium should run just fine. I have it running on Win 2K and XP (Home & Professional). It looks better on XP but seems to run well on both. Note: you can, in fact, run .NET on older operating systems. I have not had the opportunity to test the application on any of them so if you decide to try and get it to run please let me know if you have success. I will update the documentation page accordingly.

Hardware: At least 256 MB Ram and 150 MB or so of hard drive space (more if you add a lot of books).

Other programs:

You don't have to have these programs, but they may make your Scriptorium 'experience' (sorry, I couldn't help myself) more enjoyable.

Microsoft Access – All of the modules as well as the main database are Access. You can use Access to create your own modules (no programming) and edit items as well. I built the Nag Hamadi Codex by hand using Access and a form created with the wizard. I will be posting a how-to for Bible and Codex creation as soon as I can get it written. If you have Office but Access is not installed, just pop the installation disk in and follow the instructions to update your Office installation.

Cute PDF or PrimoPDF or Adobe Distiller (probably best but I can't justify the \$200 right now). You can create your own books and then export them into text form and then load them into Scriptorium. There are other ways to import a book but this is the easiest.

Textpad – Textpad is the best text editor out there in my opinion. If you don't like, there are lots of others and Notepad will get serve the purpose in many cases as well.

You will probably want Acrobat Reader (and also probably already have it), Winzip (if you don't use XP and other stuff too. Depends on how much of a power user you are.

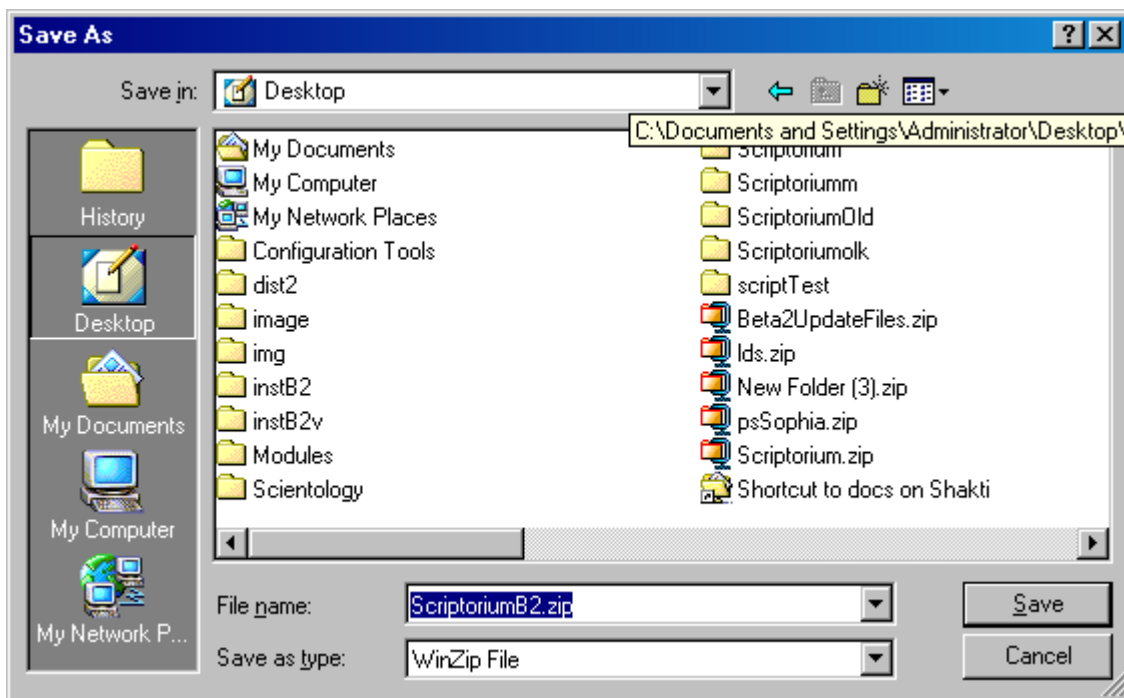

Check the Scriptorium resources page for links to download useful programs like the ones above.

Installation:

Scriptorium is designed for “drag-and-drop” installation. This means, basically, once the files in the Zip file have been unpacked, in order to run the program, all you need to do is go into the program folder and click on the executable (.exe) file. There is no installer or setup program. The same concept applies to Modules and “Plug-ins”. The files need to be in the same directory as the Scriptorium executable when the program starts and it will do the rest.

Yes, it’s really that simple.

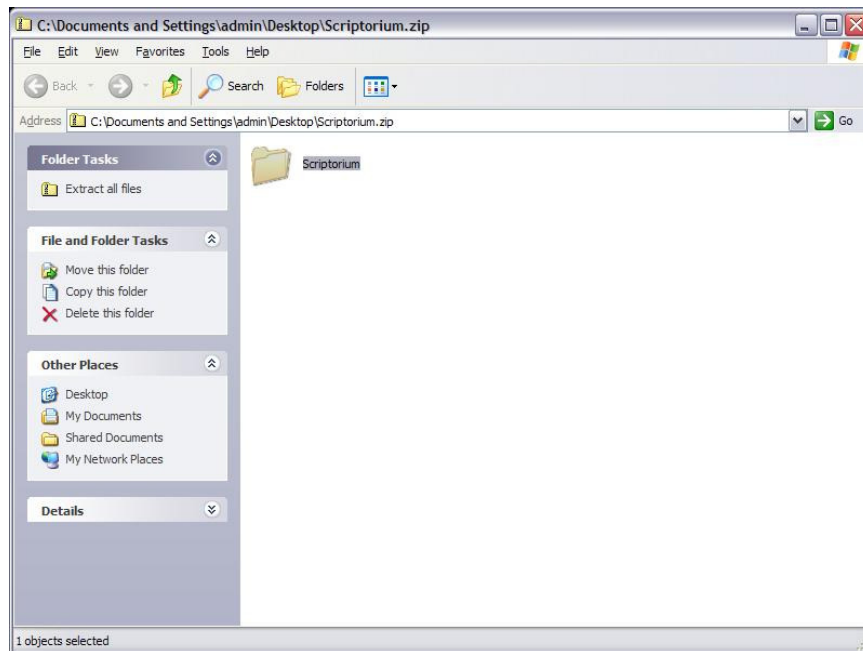

Download the latest zip file from the download page

(the filename may be different)

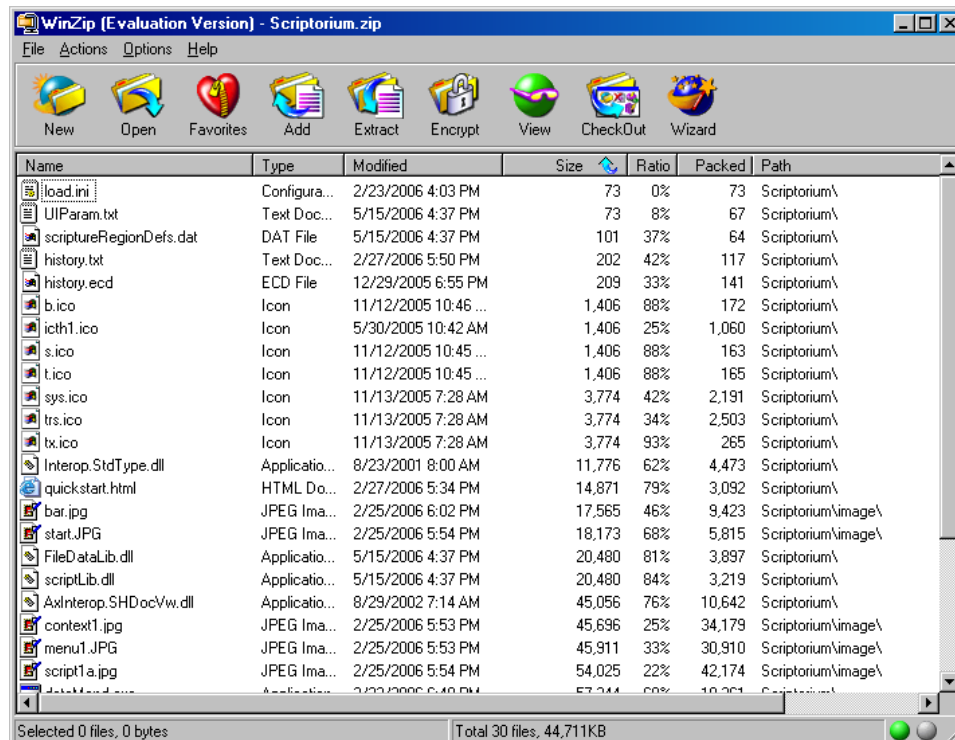

Unpack the Zip file (you might need WinZip if you have Windows 2000) where you want to run Scriptorium from. This could be the root C: drive, My Documents or Program files. It can be anywhere on the PC (like the Desktop) or even on a network share (not recommended). All of the files are already in a folder named Scriptorium.

Unpacking the Scriptorium folder

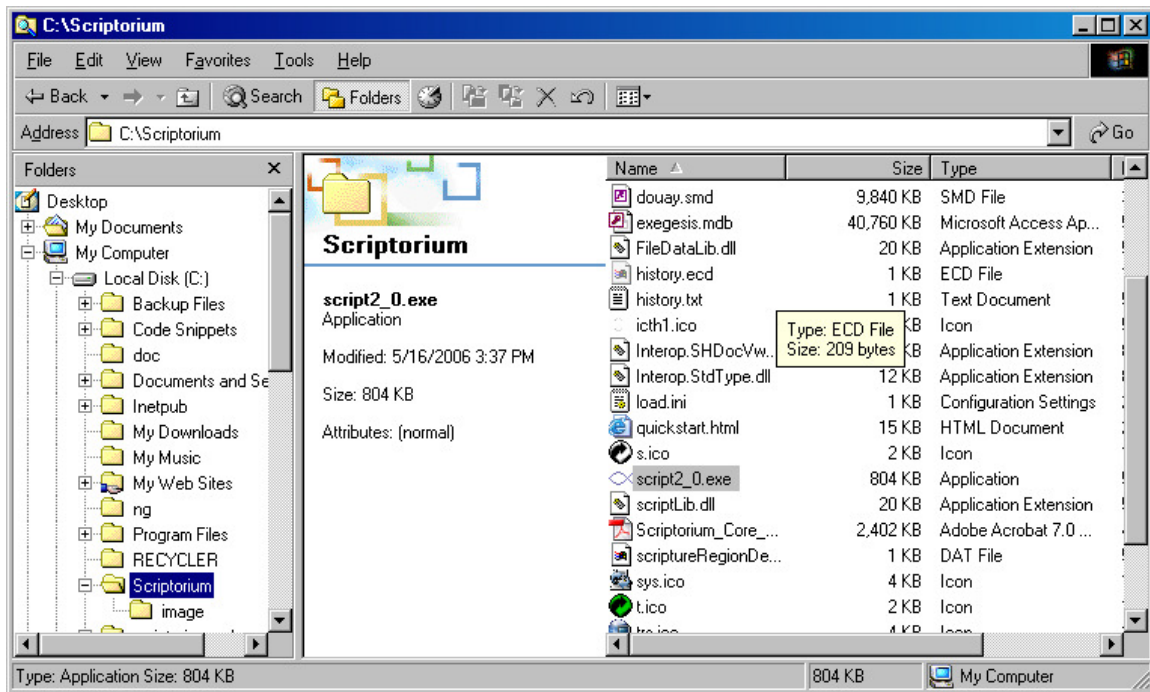

If you have XP you can open the Zip archive like a folder and drag the Scriptorium folder to where you want it. Done!

Or you can open the archive with WinZip:

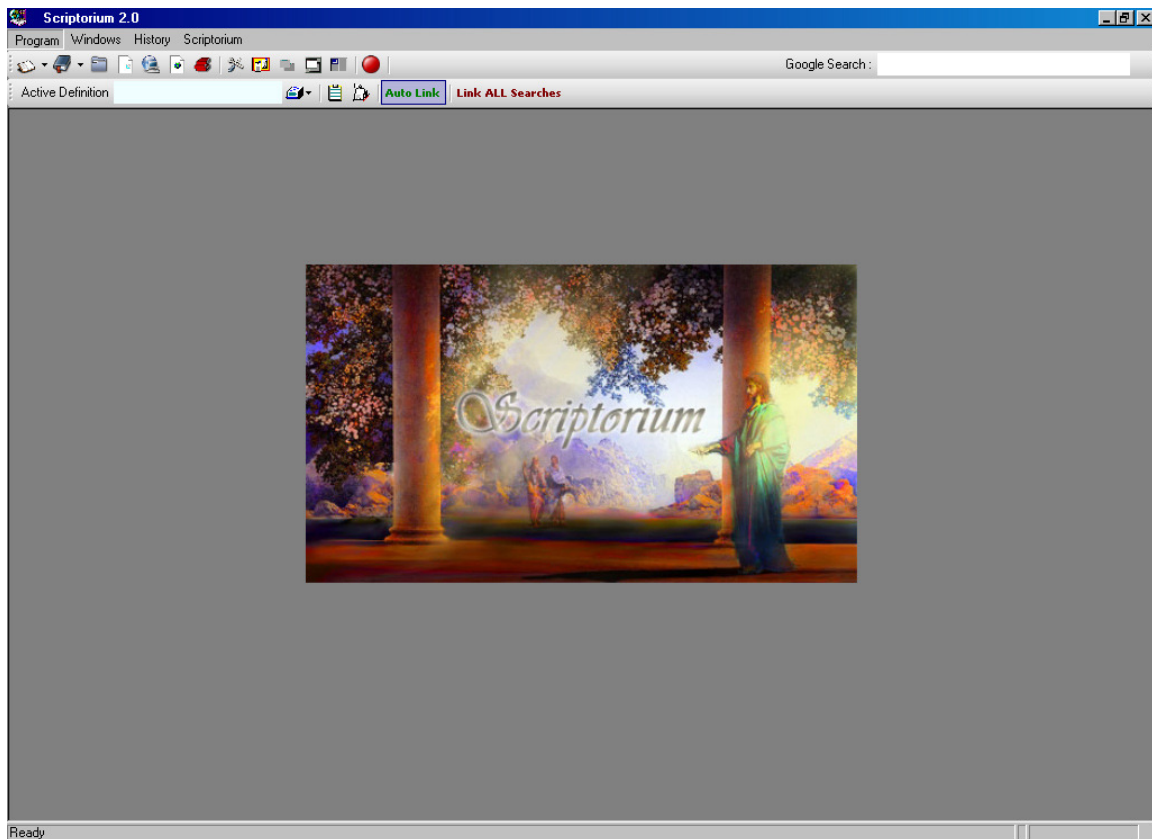

If you want to create Desktop shortcuts, open up the Scriptorium folder, right-click on the script2_0.exe file, drag (right click!) to the desktop and release. Pick create shortcut from the context menu. If the program Icon doesn't appear in the short cut the *Ichthus* icon is in the program folder, or of course, you can use your own.

Note the above installation has the Douay Rhiems Module at the top. You won't see it in a base install.

I have made every effort to make maintaining Scriptorium as simple as possible. To that end, I have stuck with the “No-install” design. If you have any problems with the program, make sure all of the files are in the Scriptorium directory and that the database files are not marked “read-only” and that there are no “.ldb” files from improperly closed sessions (you may need to turn “show all files” on in the Folder Options). I have not encountered any issues moving the program around, so please let me know if you encounter a bug or problem with the file structure (or anything else, for that matter). Send to : buglist@gnostic-scriptorium.com

Start it up. Click on the splash screen to make it go away.

Important Points when starting out:

Every function in the application can be accessed from the Main Menu and Toolbar

1. Main Toolbar

2. Main Menu

3. The Program Menu

(see the Core UI Guide for more details on the User interface).

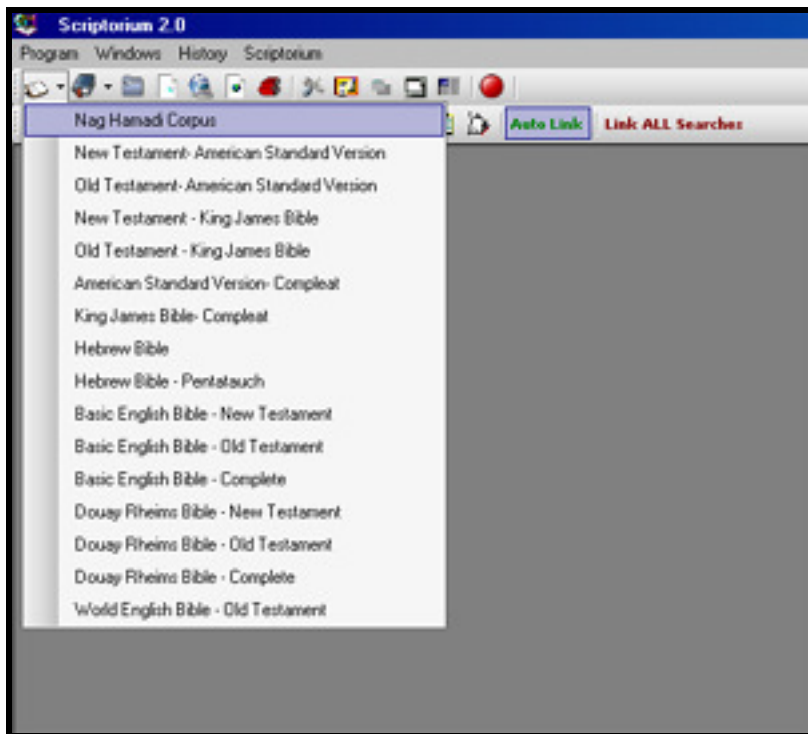

Getting Started

The program is designed to be mouse driven. The Main Menu is context sensitive, so it will change depending on the active document. When you start, of course, there is no active document, so the menu is in 'application mode'. The main toolbar (documents have their own tool bars) will start any of the document forms. Since the history is empty, there won't be anything there either.

To open a document, click on the appropriate toolbar button (or select it from the “Program” Menu. All buttons have tool-tip descriptions.

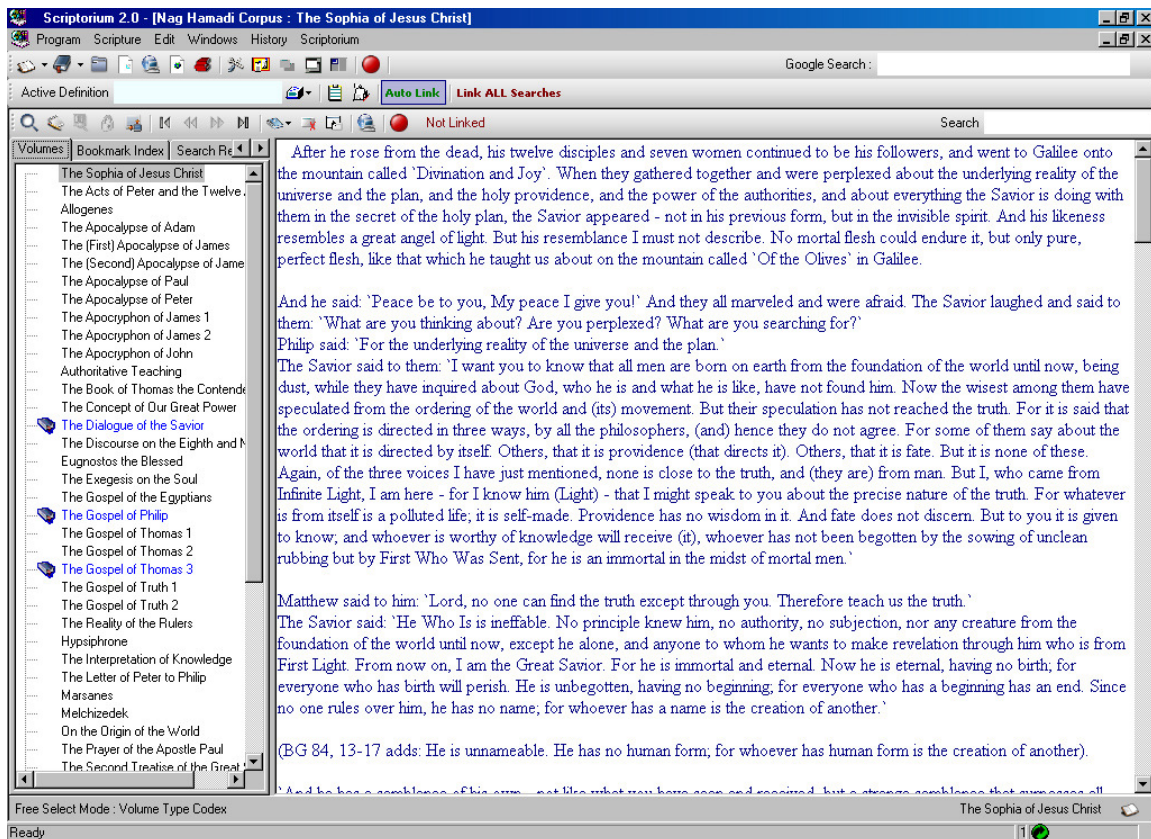

Example: View Nag-Hamadi Scriptures:

Click on the Toolbar button for the Scripture module (the arrow shows the available items). Then click on the item (the top one in this case).

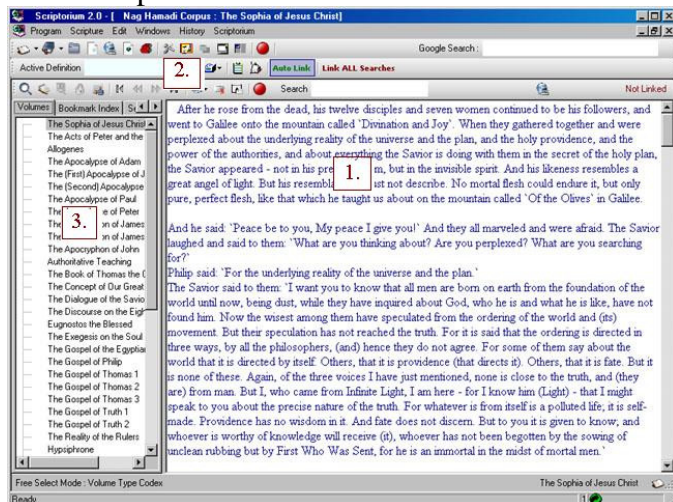

The document will open and load the selected item. Scripture and Book documents always load in full screen.

(the above list has some modules installed which you will not see unless you download them. They are free, so go get them. I'll wait)

The Document Window:

The main parts of the document window are shown below:

1. The document pane

2. The document toolbar

3. The explorer pane

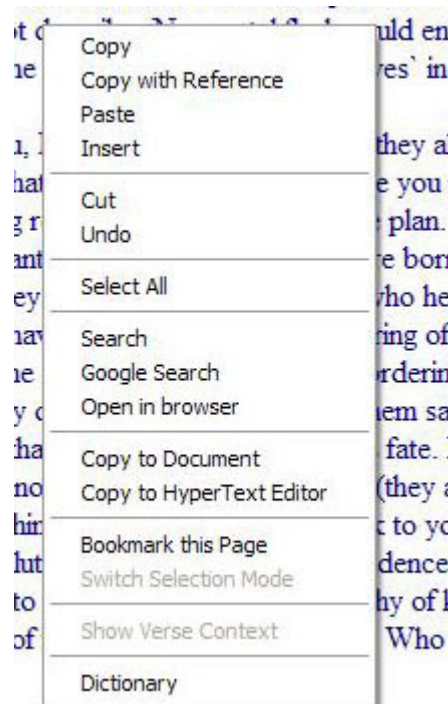

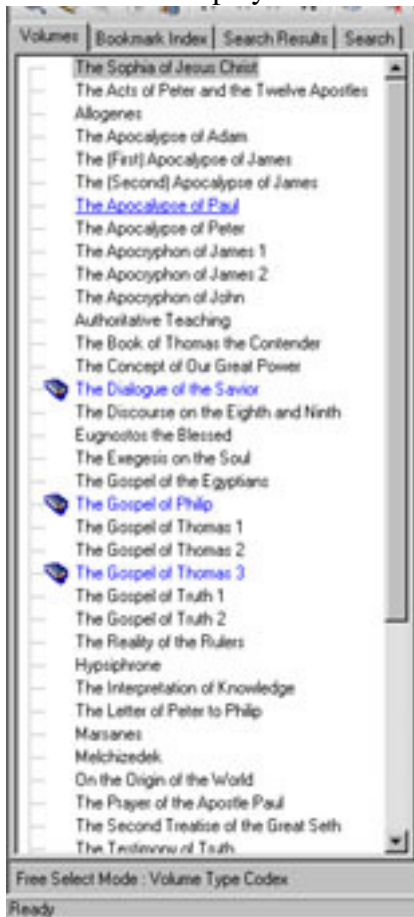

(More details for this topic in the "Core UI" Guide)

The document toolbar provides the main functions of the selected document. In this case, there is the search, bookmark, navigation, show/hide explorer pane and close buttons. Since Nag Hamadi is a Codex (there is one 'page' for each 'book' the chapter navigation is disabled. You can also search by typing a word in the document search box and pressing 'enter'.

The explorer pane has the document navigation tab, the bookmark quick select tab and the full search tab.

Clicking on a node displays selected document is. Right clicking on the document window will display the document context menu.

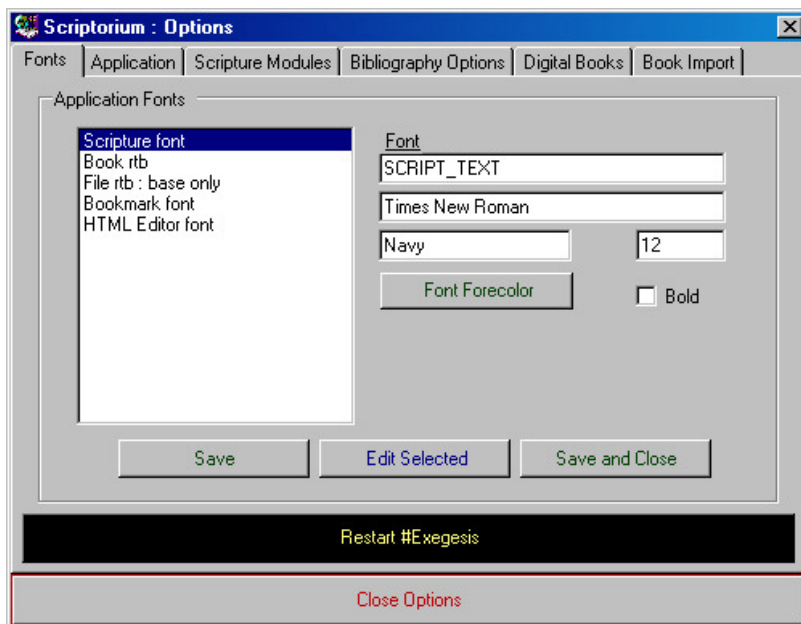

The context menu provides the basic document options. Cut, copy, select all, undo and paste should be familiar. Note that text edited in this pane cannot be saved so navigating will lose any changes. You can select the text you want and pick 'Copy to document' and that will paste the text into a new rich text document. You can search, search Google (computer has to be able to access the internet) and open a hyperlink in the browser window from here. All of these functions work with the Selected Text of the document so if you don't have any text selected, nothing will happen. Also, Eastons Bible dictionary will try and find a match for a selected word and likewise will ignore you if you haven't selected any text.

The rest of the program works along the same principals; document, toolbar, context menu. The main menu also provides all of the document functions under 'Scripture' for the main functions and 'Edit' for text operations. Scriptorium is meant to be intuitive to use, so click away and explore.

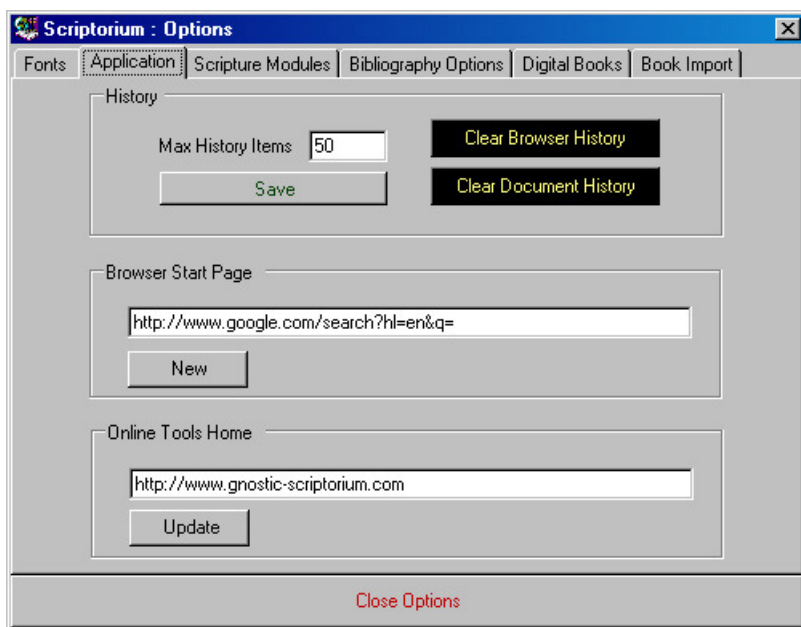

The Latest Updates, Modules and Documentation are always available at <http://www.gnostic-scriptorium.com>

Part II : Application Maintenance –The Options Window.

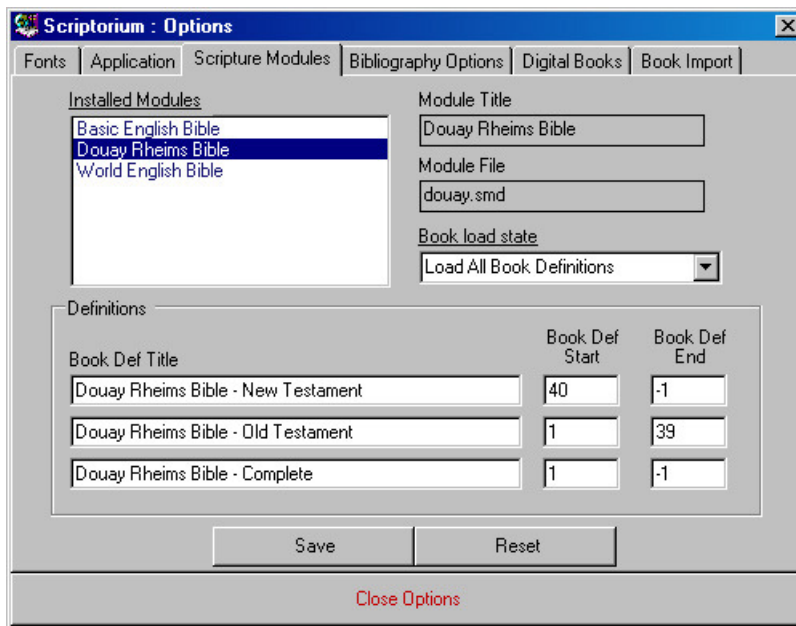

Application Fonts Tab – here you can change the display fonts for the main windows in Scriptorium.

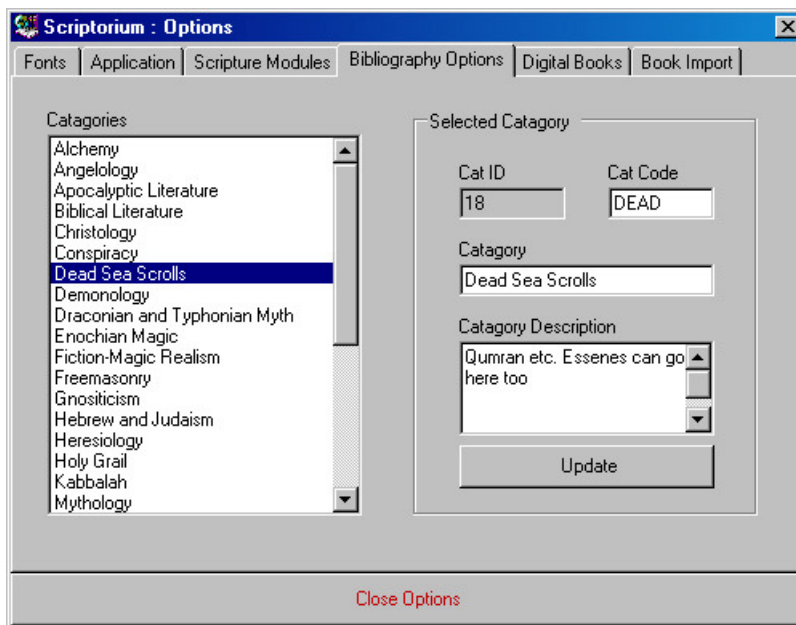

This Page allows you to set the number of “History” items for files and browser. You can also clear the history if you want (like if you move the Scriptorium Folder to a new PC, you might want to clear the File history, for example).

The Browser and Tools start pages are set here. Note that it is perfectly legal to use a local file on you hard drive if you wish.

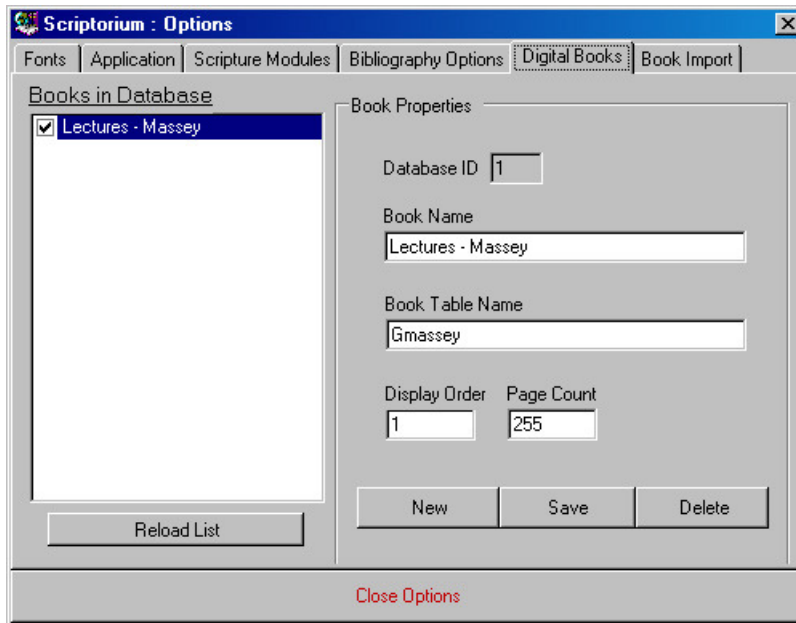

On the Scripture modules Tab you can hide or show module definitions. So, if you only wanted Whole Bibles you would set each module to show only the “complete” definition (3 in the above example)

Here you can edit the categories for the Bibliography. You can edit them in the database but remember that the ID will point to category by number so if you delete you may make your bibliography display incorrectly.

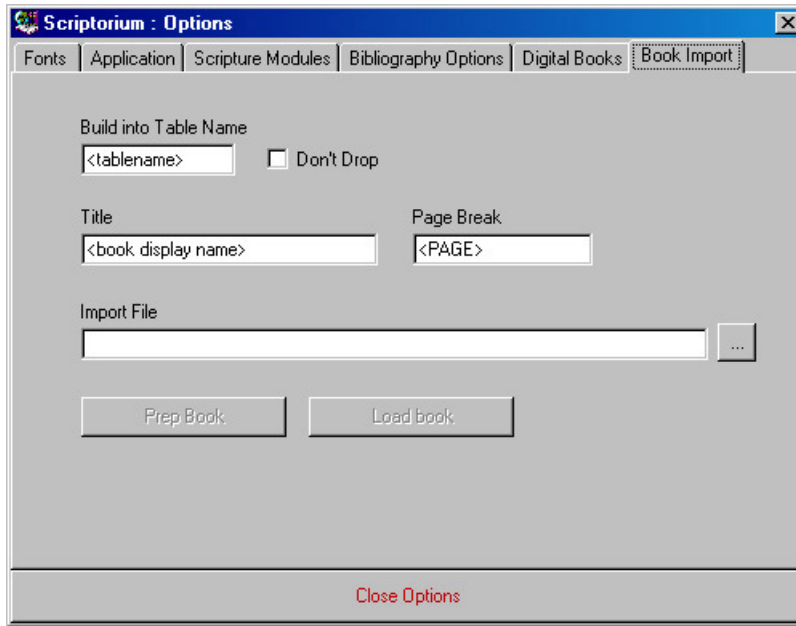

The Digital Book Tabs

These Tabs are related so we will look at them together.

The Books Maintenance page

The database tab allows you to maintain the books in the Scriptorium Database. You can edit a books display name or display order. You can also add a new book to the Digital books table. Note that the book will not be found if you add a Book with no table it will not display. The add feature is for you to be able to copy tables between databases and then add the book manually. You can also delete a book from this panel. Note that the book record and the table with the book will be deleted! If you want to keep the table, rename it before deleting the record.

The Book Import Tab

The Import tab has three main areas: the settings pane at the top, the import pane to the left and the view text area. The import function is performed in a series of steps;

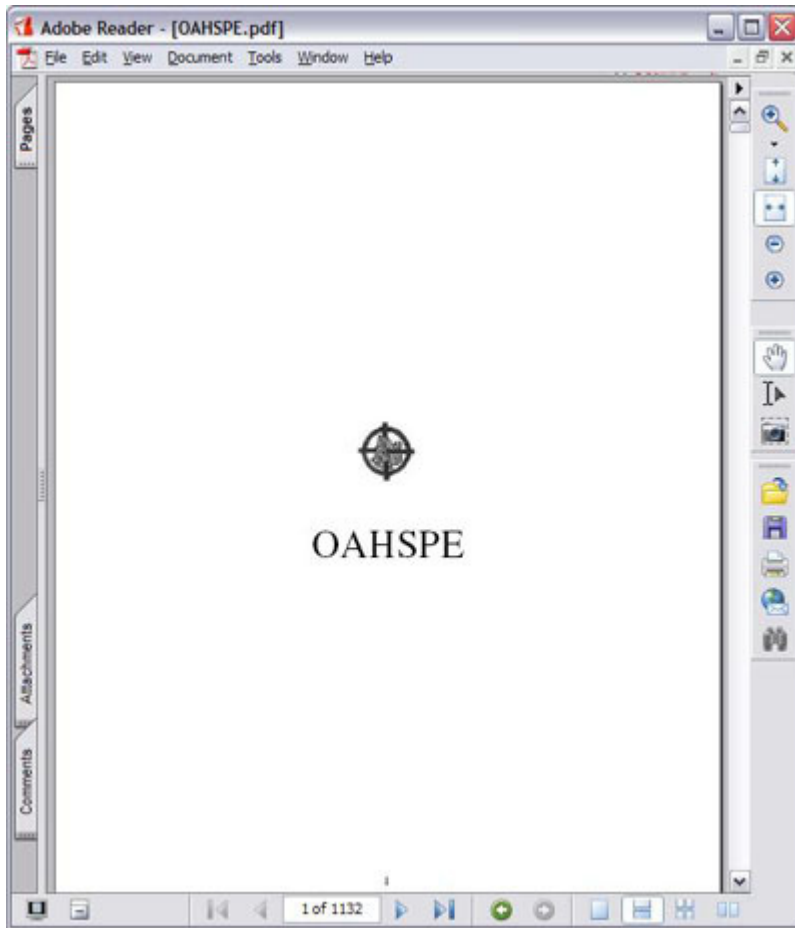

1. Open the import file - the text file to be imported. The easiest way to prepare an import file is to save an Adobe Acrobat Portable Document File (PDF) book in the adobe reader program--> choose file: save as text. The saved file will be exported into a plain text file with page breaks where the PDF file was divided into pages.
2. The text file is opened by selecting the saved file from 1. with the file browser. Type a name for the book and the table to store the page in the database.
3. The text file is 'prepped' which replaces the ascii code for the page breaks with a tag. The default tag <PAGE> will work fine for a simple import.
4. Once the prep is completed, the program will save the file as a temp file and load that into the file textbox.
5. The Import button will now be enabled. Clicking this button will begin the import routine. Once the book is imported, the tool will load the book table so you can browse the new book.
6. When you return to Scriptorium (close Options), you will now be able to view, read and index the new book.

(see example, next)

Scriptorium : Book Import

Example: Importing Oahspe

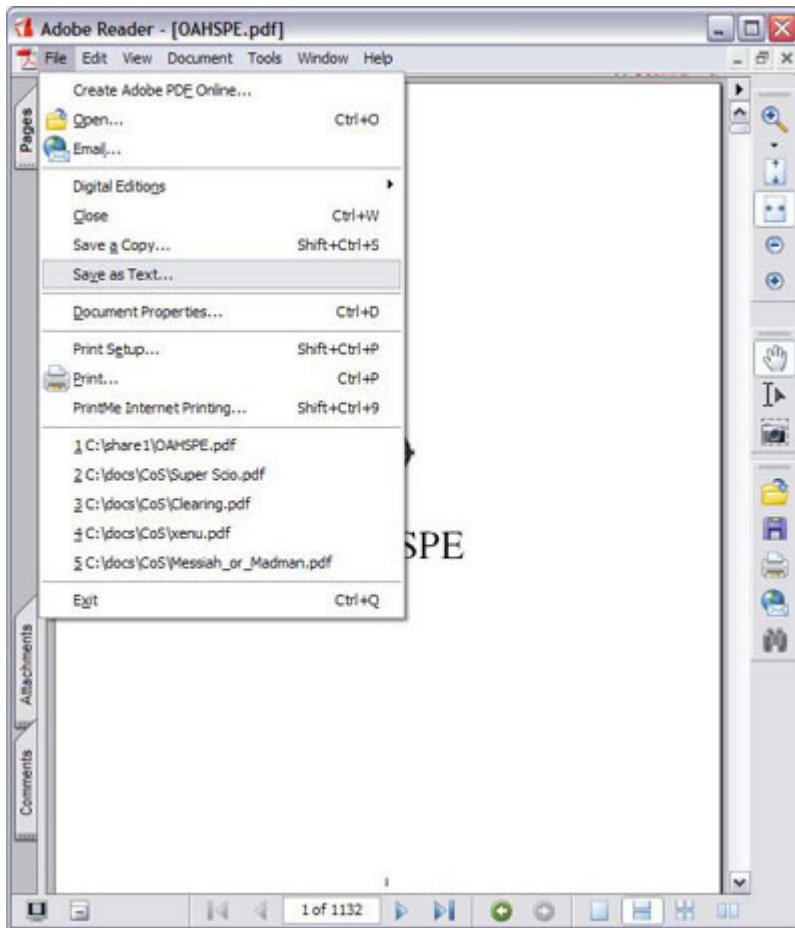

This is the largest PDF file I have so we will use it as an example.

Oahspe is a Public Domain work

Open the book in Adobe Acrobat

Note: There are many sources on the Web for PDF books that are in the **public domain** as well as many more that are available as text files. Of course, you could also import your own works as well. To make your own book, just get one of the PDF creation programs (see installation, above) and “make” a PDF of whatever you want to import. Then just save as text (.txt) and you can import as normal.

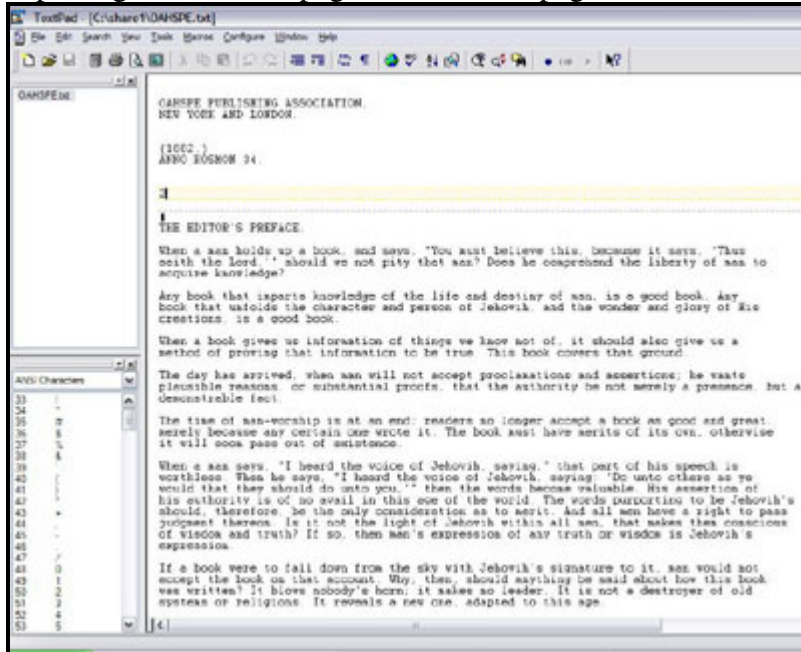

Select save as text from the File menu. (Note: some documents are protected and cannot be saved as text. Often another conversion can be found if the document is in the public domain)

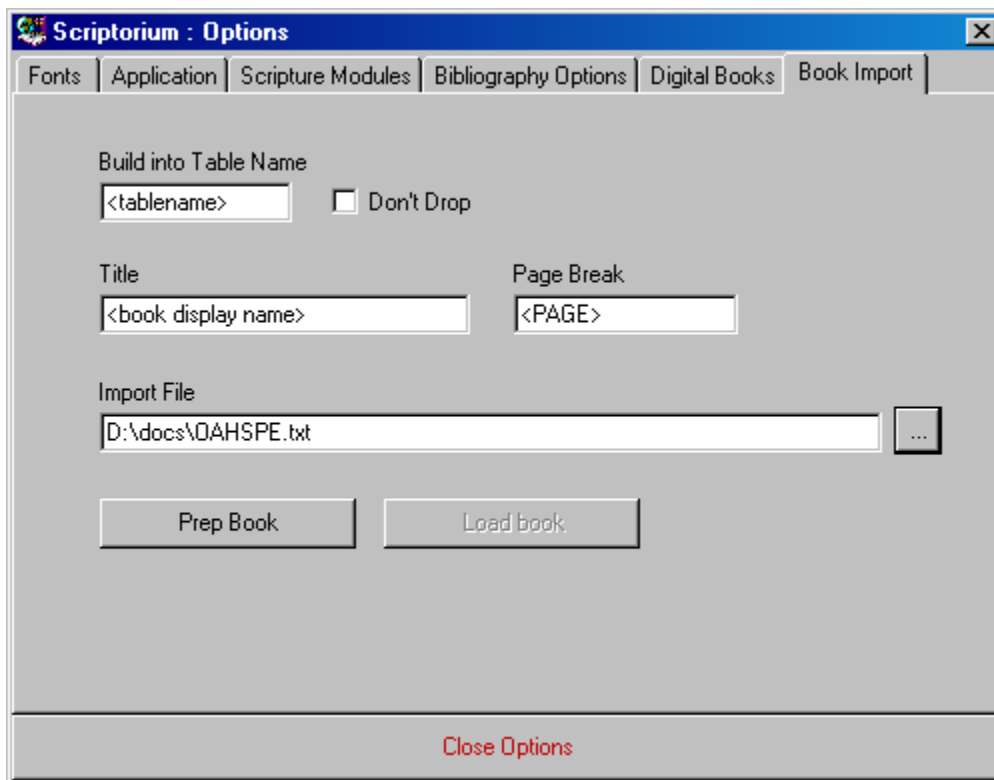

Save the file to your hard drive. If the PDF file is large, the export may take a few minutes.

If we look at the file in Textpad, we can see the formatting Acrobat generated in exporting the file. The page numbers and page breaks are visible. Start the import tool.

Click on the load button (with the ellipsis)

You will see the open file dialog. Select the file exported from Acrobat

and now you can set the book options:

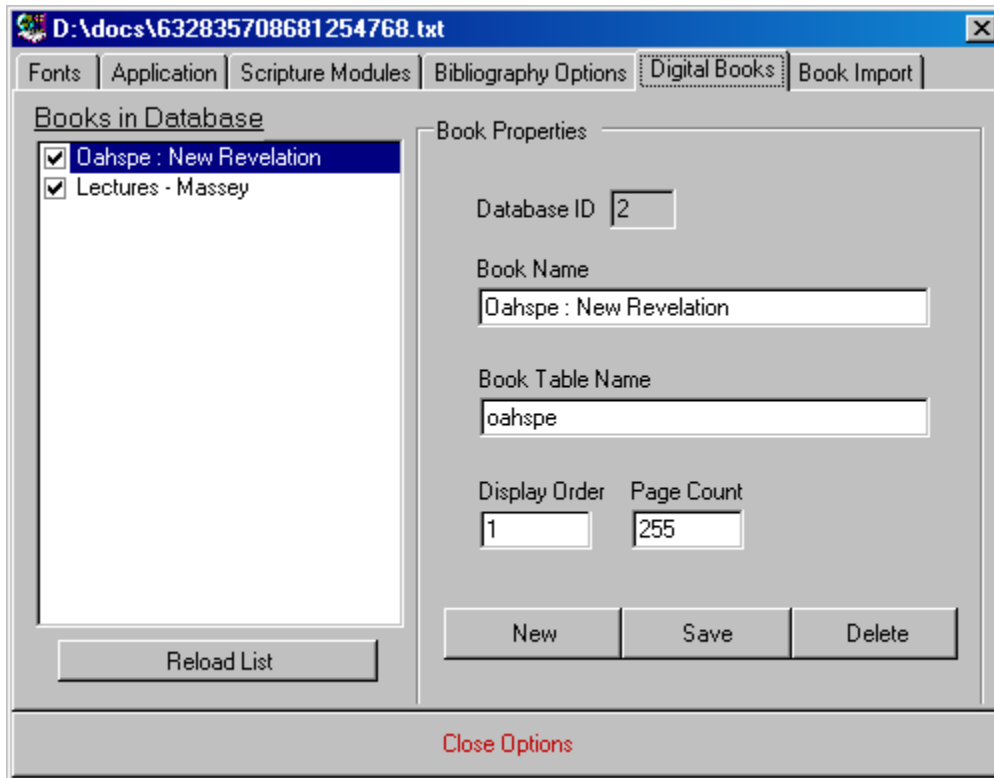

The screenshot shows the 'Scriptorium : Options' dialog box with the 'Book Import' tab selected. The 'Build into Table Name' field contains 'oahspe' and the 'Don't Drop' checkbox is unchecked. The 'Title' field contains 'Oahspe : New Revelation' and the 'Page Break' field contains '<PAGE>'. The 'Import File' field contains 'D:\docs\OAHSP.E.txt'. The 'Prep Book' and 'Load book' buttons are visible, and the 'Close Options' button is at the bottom.

In this case I named the table “oahspe” the book display title “Oahspe : New Revelation”. It can be anything (in the table name it must be a legal Access table name). Now click "Prep book"

The import tool will replace the page breaks and save to a temp file. The "Load Book" button will now be enabled. Click it to start the import process.

The screenshot shows the same 'Scriptorium : Options' dialog box, but the 'Import File' field now contains 'D:\docs\632835708681254768.txt', indicating that the file has been replaced with a temporary file. The 'Prep Book' and 'Load book' buttons are still visible, and the 'Close Options' button is at the bottom.

If you look at the Database tab you will see the book was added to the Books master table:

That's it. You can change the books order in the list by changing the display order and the name of the Book. Do not change the "pages" or the table name unless you are certain there is a problem with the import. Delete the text files and start Scriptorium to work with the new book.

GNU GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of

the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS
